

## Battrion AG Appoints Chief Financial Officer

**Dübendorf, ZH (CH) June 02, 2021** – [Battrion AG](#), a Swiss battery technology provider, announced today that Thomas Gebauer has joined the company as Chief Financial Officer.

With the onboarding of Thomas Gebauer, Battrion adds a highly experienced finance executive to the Management Team. Thomas Gebauer has gained international expertise in developing and implementing finance and business strategies for fast-growing tech companies and has raised over CHF 120M in capital as part of his tenures. In his last position as Co-founder and Co-CEO of Volterion GmbH, an energy storage company, he grew and developed the company, leading the company's financing and internationalization efforts, resulting in the company's acquisition by the automotive supplier Boysen-Group.

*"I am pleased to welcome Thomas Gebauer to Battrion's leadership team" said Dr. Ulrich Ehmes, Chairman of the Board of Battrion AG. "Thomas' extensive experience in financial and executive management as well as venture capital and private equity investments will help Battrion scale its business."*

Markus Vollstedt, Chief Executive Officer at Battrions comments: *"I am looking forward to working closely with Thomas on the various business opportunities the battery market provides for Battrion. Thomas combines CFO experience in dynamic settings, battery market insights, and brings additional seniority to the management team."*

*"I am thrilled to join Battrion. With its highly innovative technology, Battrion is poised to have a large impact on lithium-ion batteries to make them charge faster and overall more sustainable. I am looking forward to working with the team to execute on the company's priorities,"* said Thomas Gebauer.

As CFO, Thomas Gebauer will lead Battrion's fundraising, financial management, and investor relations, reporting to the CEO.

### **About Battrion AG**

Founded in 2015, Battrion is a spin-off of the Swiss Federal Institute of Technology (ETH Zurich). Battrion operates a research lab and production facility in Dübendorf, Zurich where it develops its Aligned Graphite® technology, a fabrication technology for lithium-ion batteries that improves the microstructure of negative electrodes. The technology significantly increases the charge- and discharge performance of lithium-ion batteries and is particularly suited for EV and high-performance applications. Battrion produces and markets standardized and customized negative electrodes with Aligned Graphite® and additionally offers its technology on a license basis.
